

SVEA KANAL- a two-way channel for business support between the Nordic and the west Balkan regions.

Business consultancy – where we offer support for SME when establishing business, B2B market activity and requested support on the Nordic as well as on the west Balkan market.

Agency – representing Nordic innovative techniques in the energy efficiency sector and environment protection in the region of Western Balkan.

Our ambition is to be natural channel for small and mid size companies which are doing business in the Nordic and West Balkan regions – and who wants access to the other market. Svea Kanal channel business activity between these regions.

New technology from OKR Cleaning – Aerovit Type R

Aerovit – cleaning system on compressed air (shock-blast) for flame tube and hot water boilers in land and marine applications (0,2-30 MW).

OKR Cleaning continues to improve their products and to implement new solutions in boiler cleaning technology.

They have started manufacturing new cleaning system - Type R. It is a rotational device consisting of 4 standard Aerovit valves, rotating by 360 degrees. Operating pressure of the compressed air is 8-9 bar.

Type R works similarly to ordinary steam soot blower, but without the consequences of eroding the boiler tubes when using valuable steam that should be used for production purposes rather than cleaning. It is intended for cleaning tube bundles in boilers, for example in economizers.

Svea Kanal is proud to announce that one of the first installations of Type R will be done by one of our clients, boiler producer Kirka Suri in Serbia.

For further informations on the Type

R system, please do not hesitate to call us.

New Aerovit installations

List of our clients is growing. In 2010 we have expanded on new markets.

Company **Radijator Inženjering** from Serbia has bought one valve test system and 4 valve complete system for their 300 KW biomass boiler, showing that Aerovit can be applied to smaller boilers aswell.

Boiler producer **Biokolor** from Slovenija has installed Aerovit system on their 1.5 MW biomass boiler.

Svea Kanal has just sold another Aerovit system for Biokolor 6MW boiler. The installation will take place in Italy by the end of 2010.

Đuro Đaković Kotlovi has installed Aerovit system on their 750 KW thermal oil boiler in England, part of cogeneration facility in cooperation with KIV Vransko.

New location

In addition to new business activities, Svea Kanal also has a new location.

We have moved our office to premises in Hotel Kolovare, Zadar.

Hotel Kolovare provides great support for b2b meetings, seminars and presentations, which is one of the reasons we are here now.

Our address now is :

Svea Kanal d.o.o.

Hotel Kolovare,
Bože Peričića 14
